

CRM-Based Lead Nurture Campaign

Simulated case study — SkillBridge Academy (fictional EdTech company)

Problem

SkillBridge Academy runs free webinars to generate leads for its self-serve course checkout, but has no structured follow-up after the webinar ends. Leads who don't convert immediately are never re-engaged, resulting in a low baseline lead-to-enrollment rate.

Approach

Designed a behavior-based, 3-segment nurture system instead of one generic follow-up email:

- **Segment A** — Attended webinar, didn't buy (warm, moderate urgency)
- **Segment B** — Abandoned checkout (hot, highest urgency, shortest window)
- **Segment C** — No-show / cold (low intent, longer re-engagement play)

Execution

Mapped the full funnel (signup → attendance → checkout → enrollment), defined trigger logic per segment, wrote all 18 emails (subject, body, CTA) with tone calibrated to each segment's intent level, and built a visual flow diagram of the branching logic.

Segment	Emails	Trigger window	Priority
A — Attended, no buy	6	Day 1–7	Medium
B — Abandoned checkout	6	Hour 1–Day 5	Highest
C — No-show / cold	6	Day 0–14	Lowest

Projected impact

Segment	Open rate	Click rate	Sequence convers
A — Attended, no buy	45–55%	12–18%	8–12%
B — Abandoned checkout	55–65%	20–28%	15–20%
C — No-show / cold	20–30%	4–8%	2–4% (direct)

Blended projected lift: ~10–12% lead-to-enrollment conversion, versus an estimated 2–4% baseline for leads with no structured follow-up.

Metrics are projections based on published EdTech and e-commerce lifecycle-email benchmarks (Mailchimp, Klaviyo industry reports) — not live campaign results, since this is a simulated project.

Full email copy, trigger-logic tables, and the flow diagram are available in the companion GitHub repository.
